

BYOD Security Without the Privacy Tradeoff

Mobile security that keeps you safe and your personal life personal

iVerify secures your phone for work without the invasive controls of traditional security tools. It doesn't manage your device, can't delete your data, and never sees your personal content. It just monitors your operating system for signs of compromise, so you stay protected without ever giving IT ownership of your phone.

no texts  no emails  no photos  no contacts  no browsing history

What iVerify Collects

iVerify looks for system-level threats; is your phone rebooting multiple times in a very short period? Is a critical process crashing repeatedly?

We correlate those signals with known threats to mobile devices, such as exploits like Coruna, Darksword, and Pegasus, and use them to anticipate new and novel attacks on your device. Then, we'll let you know first.

Built for Real “Bring-Your-Own”

iVerify is designed for organizations that want to secure employee-owned devices without compromising trust, perfectly balancing protection with privacy.

Organizations can:

- Strengthen mobile security posture
- Support compliance goals
- Integrate high-quality mobile risk signals into existing security workflows

Employees can:

- Keep their phone personal
- Avoid invasive device management controls
- Stay protected from modern mobile threats
- Use one device for work and life with confidence

Stay safe. Stay compliant.
Keep phones personal.
